

Title

620. Not Boring Movies

Problem Statement

You are given a table Cinema that stores information about movies.
Your task is to:

- Select movies whose **ID is odd**
- Exclude movies where the **description is "boring"**
- **Sort the result by rating in descending order**

Table Structure

Cinema

Column Name	Type	Description
id	int	Primary key
movie	varchar	Movie name
description	varchar	Movie description
rating	float	Rating (0–10)

Hint

- Use the **modulus operator (%)** to check for odd IDs
- Filter out "boring" movies using **!=**
- Use **ORDER BY rating DESC** for sorting

Solution (MySQL)

```
SELECT *  
FROM Cinema  
WHERE id % 2 = 1  
      AND description != 'boring'  
ORDER BY rating DESC;
```

Title

1251. Average Selling Price

? Problem Statement

You are given two tables:

- Prices: stores the **price of a product during specific date ranges**
- UnitsSold: stores **units sold per product on specific dates**

Your task is to calculate the **average selling price for each product**, where:

- Average selling price = **(total revenue) / (total units sold)**
- Revenue = price × units
- If a product has **no sales**, its average selling price should be **0**
- The result should be **rounded to 2 decimal places**

Table Structure

Prices

Column Name	Type	Description
product_id	int	Product ID
start_date	date	Price start date
end_date	date	Price end date
price	int	Product price

UnitsSold

Column Name	Type	Description
product_id	int	Product ID
purchase_date	date	Date of purchase
units	int	Units sold

Hint

- Join Prices and UnitsSold **on product_id**
 - Match the **purchase_date** between **start_date** and **end_date**
 - Use SUM(price × units) for total revenue
 - Use SUM(units) for total units sold
 - Use LEFT JOIN to include products with **no sales**
 - Use IFNULL() (or COALESCE) to handle missing sales
-

Solution (MySQL)

```
SELECT
  p.product_id,
  IFNULL(
    ROUND(SUM(p.price * u.units) / SUM(u.units), 2),
    0
  ) AS average_price
FROM Prices p
LEFT JOIN UnitsSold u
  ON p.product_id = u.product_id
  AND u.purchase_date BETWEEN p.start_date AND p.end_date
GROUP BY p.product_id;
```
